

LED Power Supplies

Slimline 100w PSU 24v

Specifications

Wattage	100 W
Current	4.16 A
Output Voltage	24v
Inrush current	65amps max
PF (Power Factor)	
IP Rating	IP20
Input Voltage Range	100-240vac
Dimensions	320*30*20mm
Tc (max surface temp of unit)	
Max recommended load	75w

A super slim version of the established PowerPro100 - designed for mounting internally in light boxes or aluminium profiles to create discreet, low voltage solutions.

Designed for long term reliability and safety with a mean time between failure or > 100000 hours, this unit has built in protection against open-circuit, short-circuit, overload and overheating. It is not mains dimmable, therefore if you wish to dim the LED strip you must place an inline dimmer on the low-voltage side, between this power supply and the strip. The primary/input end is marked with a Live and Neutral terminal to connect to a 100-240V AC current input. The secondary/ output side also features screw-terminals to connect directly to an LED strip assembly. It is SELV marked and has Class II Protection to guard against electric shock from direct and indirect currents with a fail-safe transformer.
