

HaloLED Interface For Single Colour LED Strip

Specifications

Operating Voltage	12-24v Constant Voltage
Number of Zones	4
Number of Scenes	Depends on Controller
Warranty	3 years
Max Amps	4 per channel
Cables Supplied	None
Dimensions	172*53*27mm
Operating Range	20m
Compatible with APPLink Wifi Link	Yes

The heart of the HaloLED system, a versatile receiver unit which is connected to any single colour low voltage, constant voltage lighting product such as LED strip.

It can handle up to 5 amps which means that you can run up to 10m lengths of single colour ProStrip120.

It's easy to set up and pair to other items in the HaloLED range - just press 2 buttons on the dimmer, and then one press on the chosen controller and that's it.

You can choose from a hand held remote, a wall mounted touch panel switch or smartphone control - HaloLED is designed so you can use any or all of the control options as best suits you.
